Adobe just got a bit more like Apple. The page layout is completely the same as Apple's Pages on Mac and iOS, while the content interactive tools are exactly the same as on Mac apps. The updated interface is similar to Illustrator, but with a fully-fledged Retina display as its primary source of inspiration. There are a couple of notable differences: The number of windows has been reduced to five, the top bar, with buttons for the actions taken, has been moved to a cleverly-positioned row along the top of the editing canvas, and the canvas is now scaled to show the entire image. Remember the days before automatic retouching on Photoshop? You'd open up an image and scroll over some hideous highlighting or blemishing, correct it with one of the eraser tools, and then apply the type of retouching. That's a lot of work. Now, with the Pre-Workflow Suggestions feature, Adobe has hand-picked the best corrections for each photo, plus a slew of other tweaks like exposure compensation, tonal adjustments, and lens corrections. Not only is it longer to do it, but it's also far more accurate, which makes it more enjoyable. Still, it's interesting to see Adobe take this advice on board. You can currently choose which defaults you want to use, and override them with your own settings when you open the image. Lightroom 5 is a slick and sophisticated program for managing your images that sits comfortably at the top of the Photoshop family. Though it needs to import a little bit more disk space than its predecessor, Lightroom 5 is still numerous times better on battery life than the in-builtCamera RAW processing program. It also has a feature called Develop Presets that helps you to get to grips with best practice in darkroom techniques, like cross-processing images or improving details in middle-tone areas. Of course, the most famous feature of Lightroom, the ability to fine-tune your image to its optimum appearance for print and web use, makes the program a natural place to work.
